THE PROBLEM

Expectation

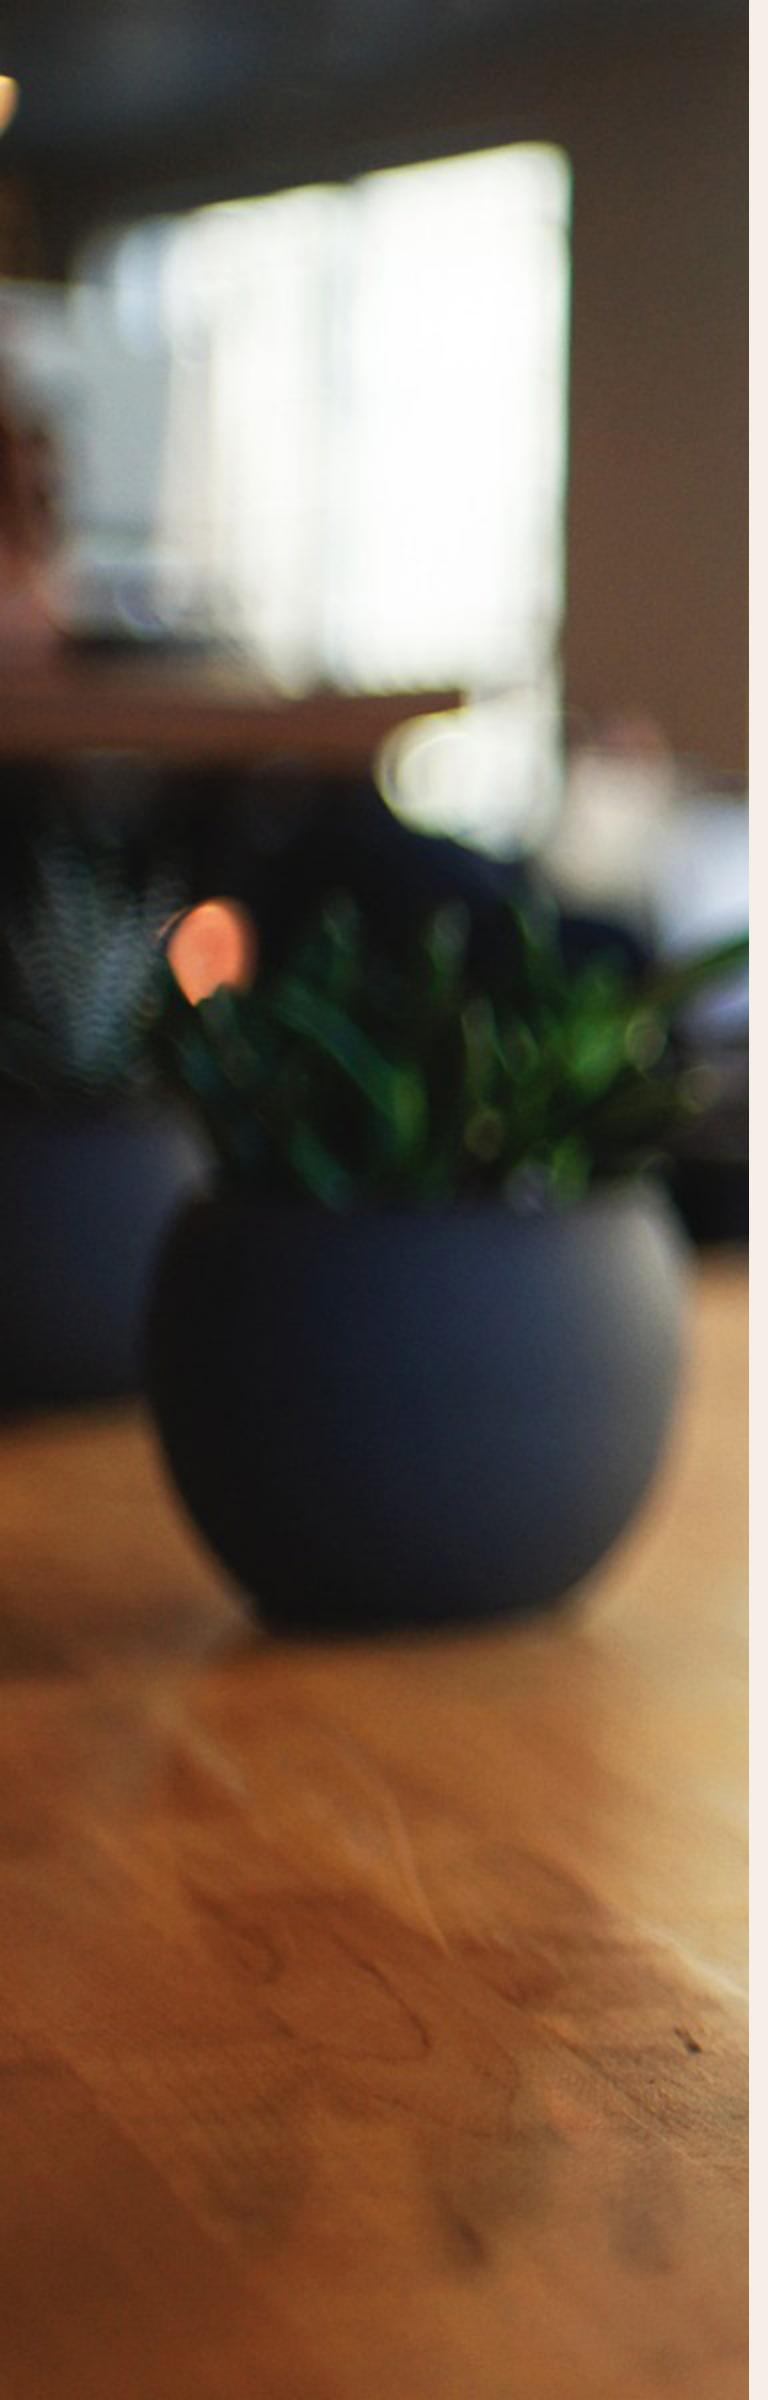

Expectation
vs. Reality

Users

- People like me
- People like my mom
- People not like me or
my mom

Tasks

- Remember to water your plants!
 - Get plant care advice
 - Find out best practices
- 

Goals

- Keep plants healthy
- Not have to *think* about it

Workflows

- Mostly working on memory or observation
- Fixing problems instead of keeping them healthy
- Relying on memory of plant tags

Pain Points

- Human error and memory
- General busy-ness
- Out of sight, out of mind

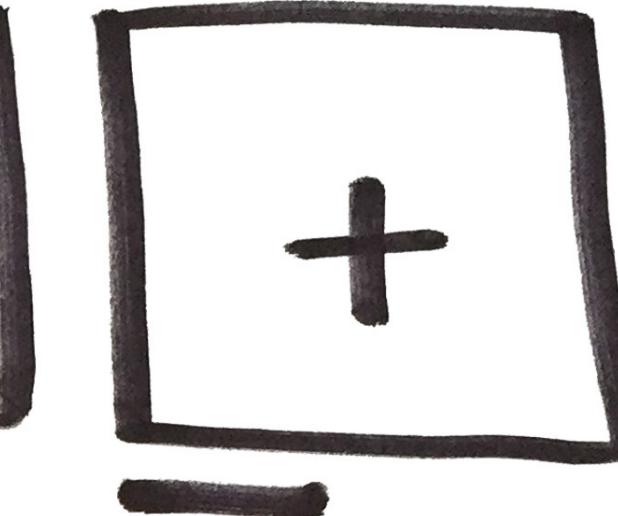

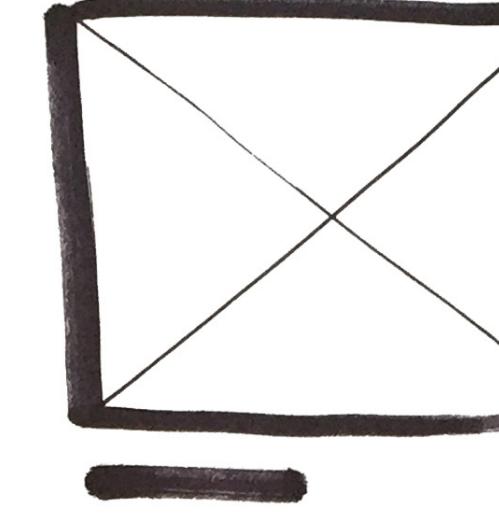

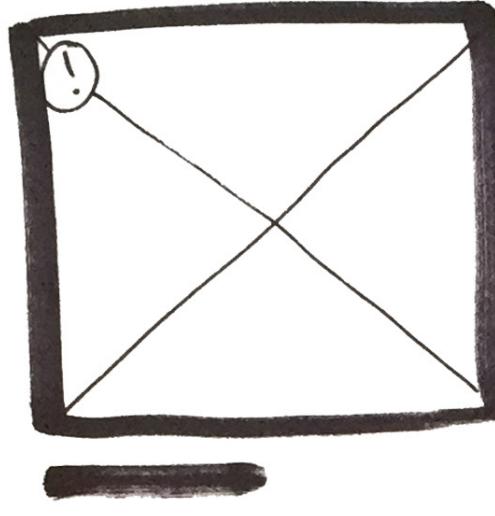

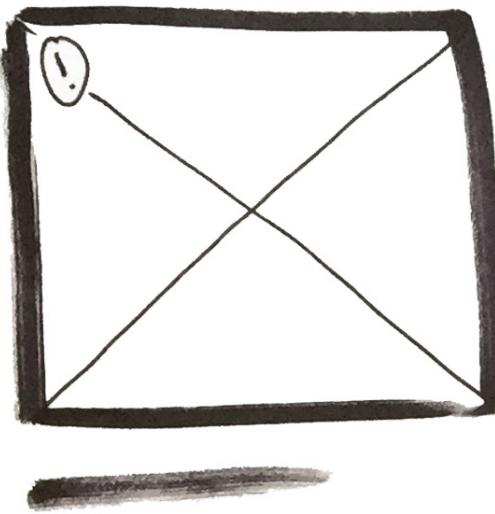

THE PROCESS

MENU / NAV

Possible functions.-

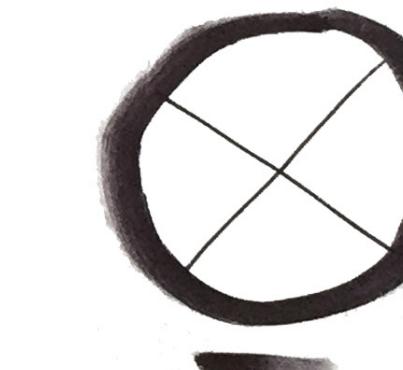

+ calendar + search + events
+ friends + wishlist?

MY PLANTS

- organized by what needs attention first
- could also reorganize (alphabet, longest life, etc.)

MY TROPHIES / BADGES

- rewards/incentives
to take care of
your plants

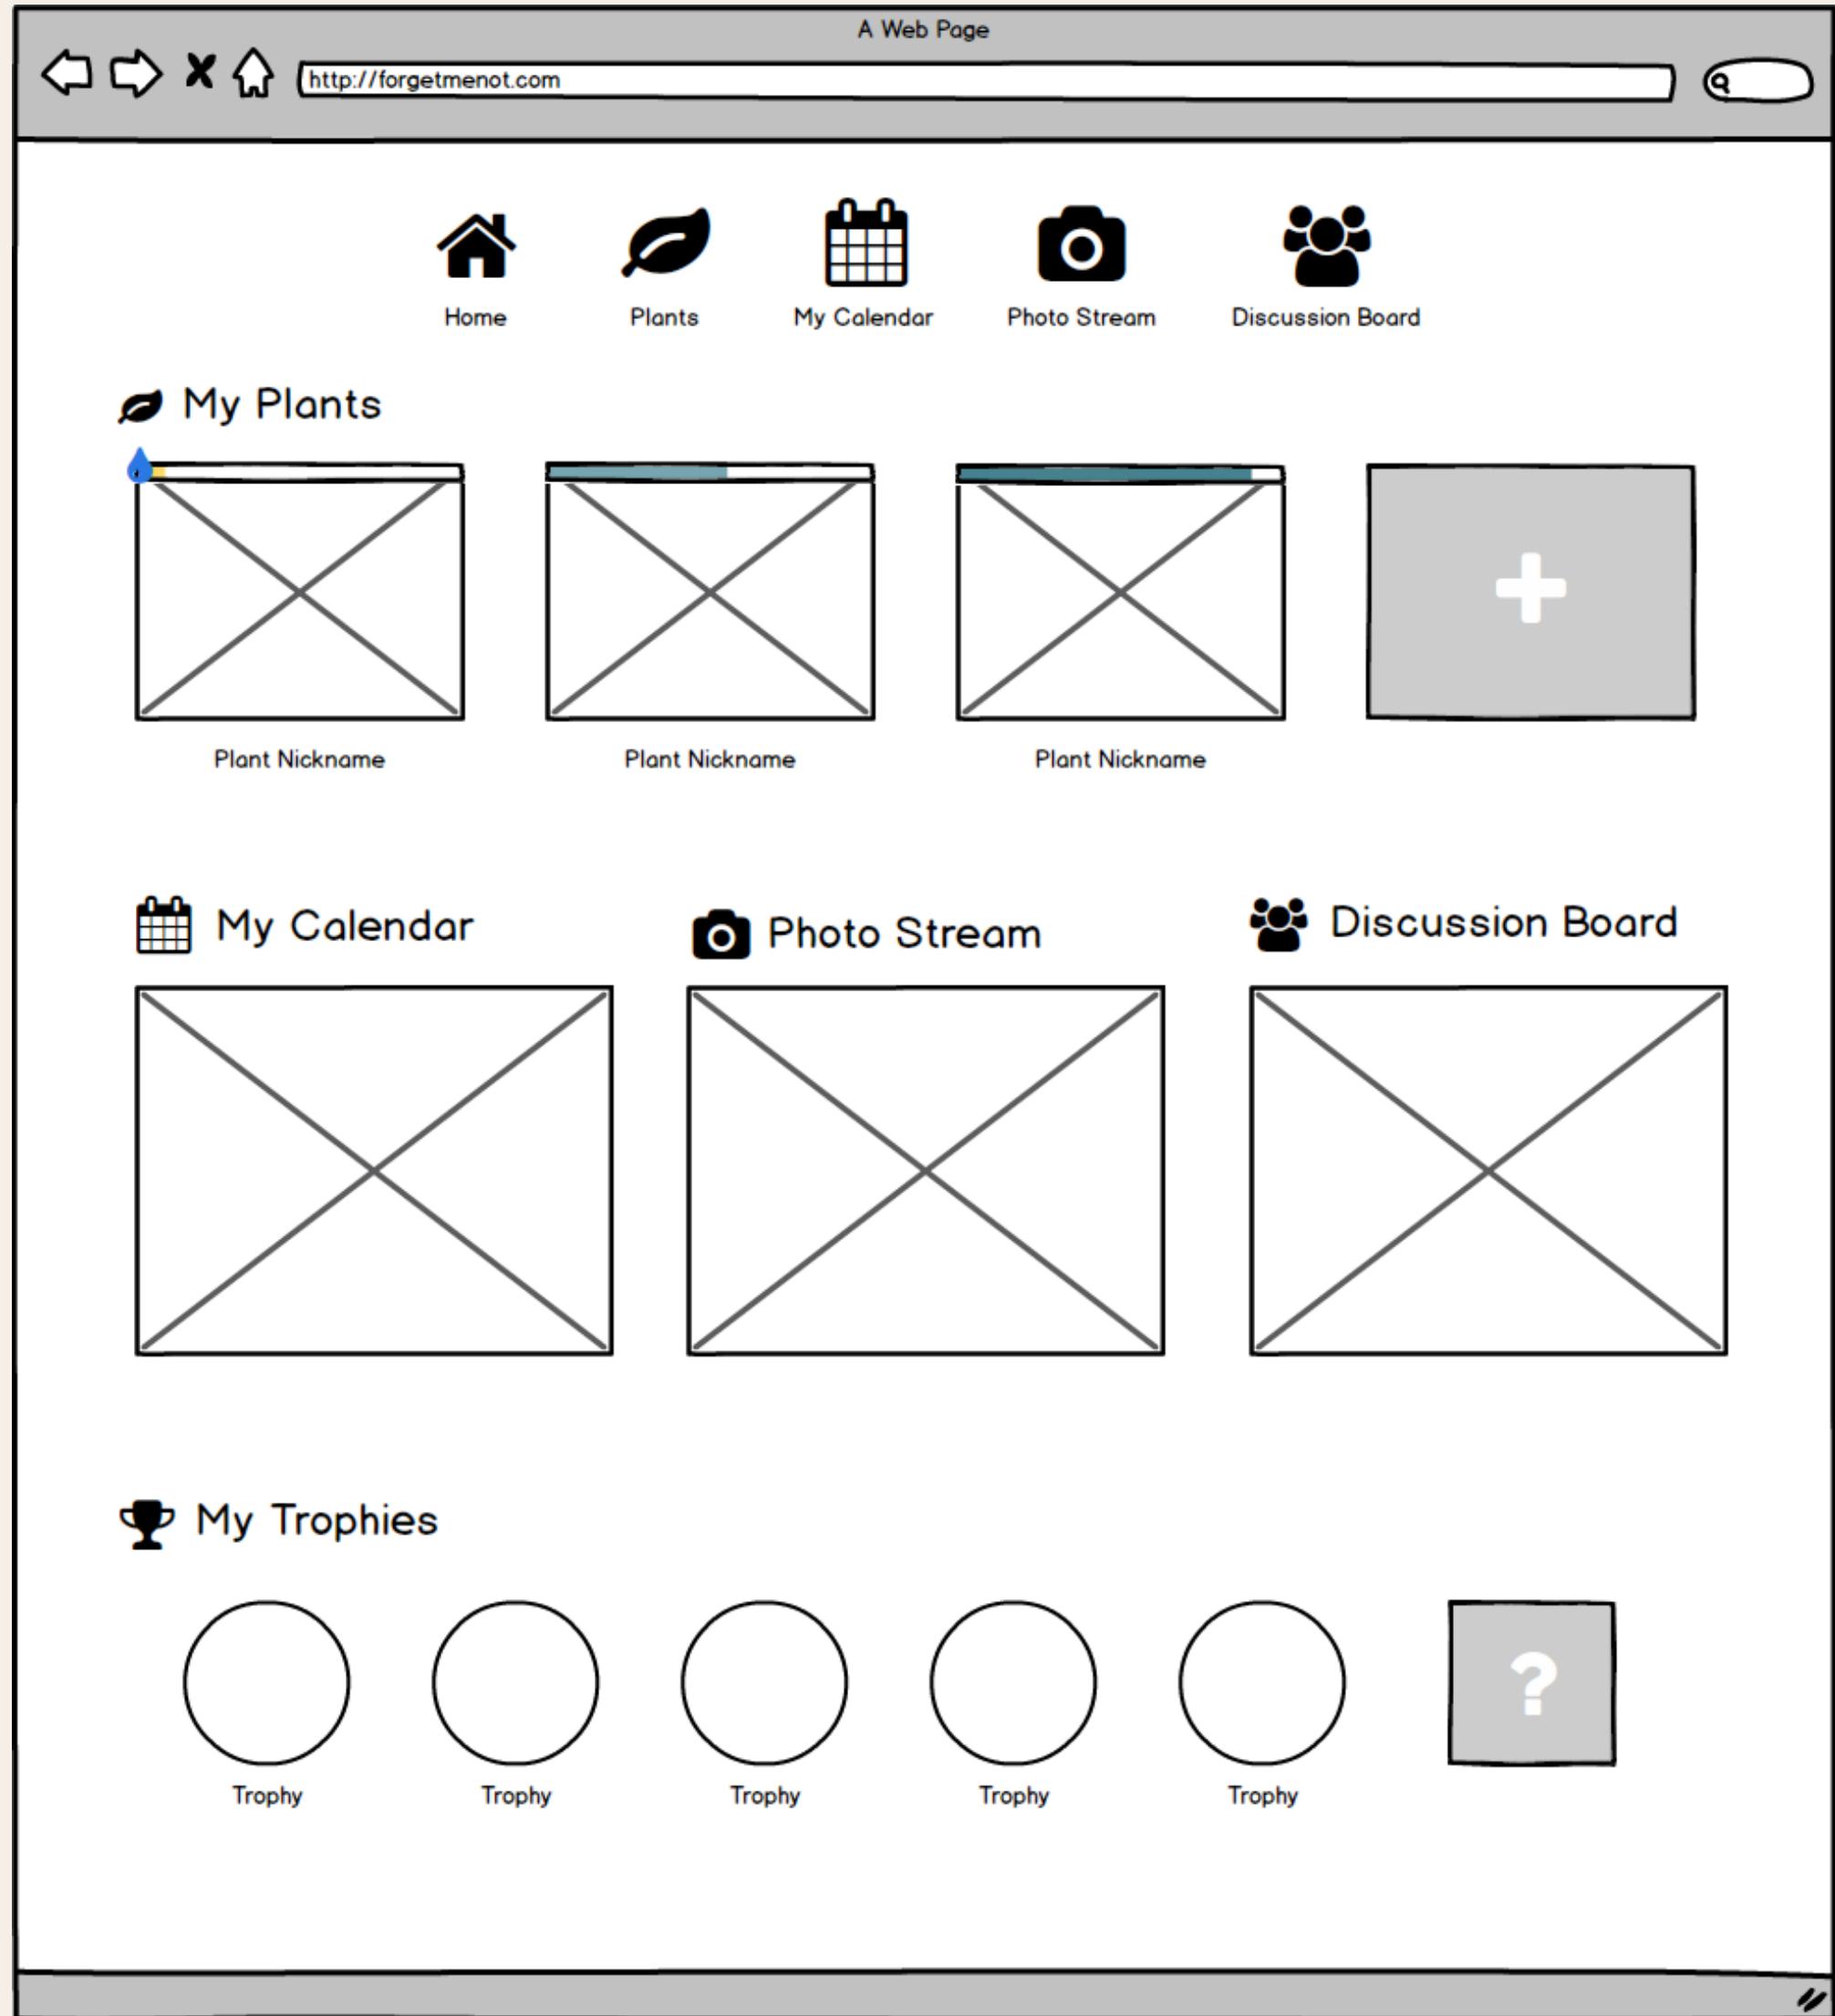

CALENDAR (PLANTS)

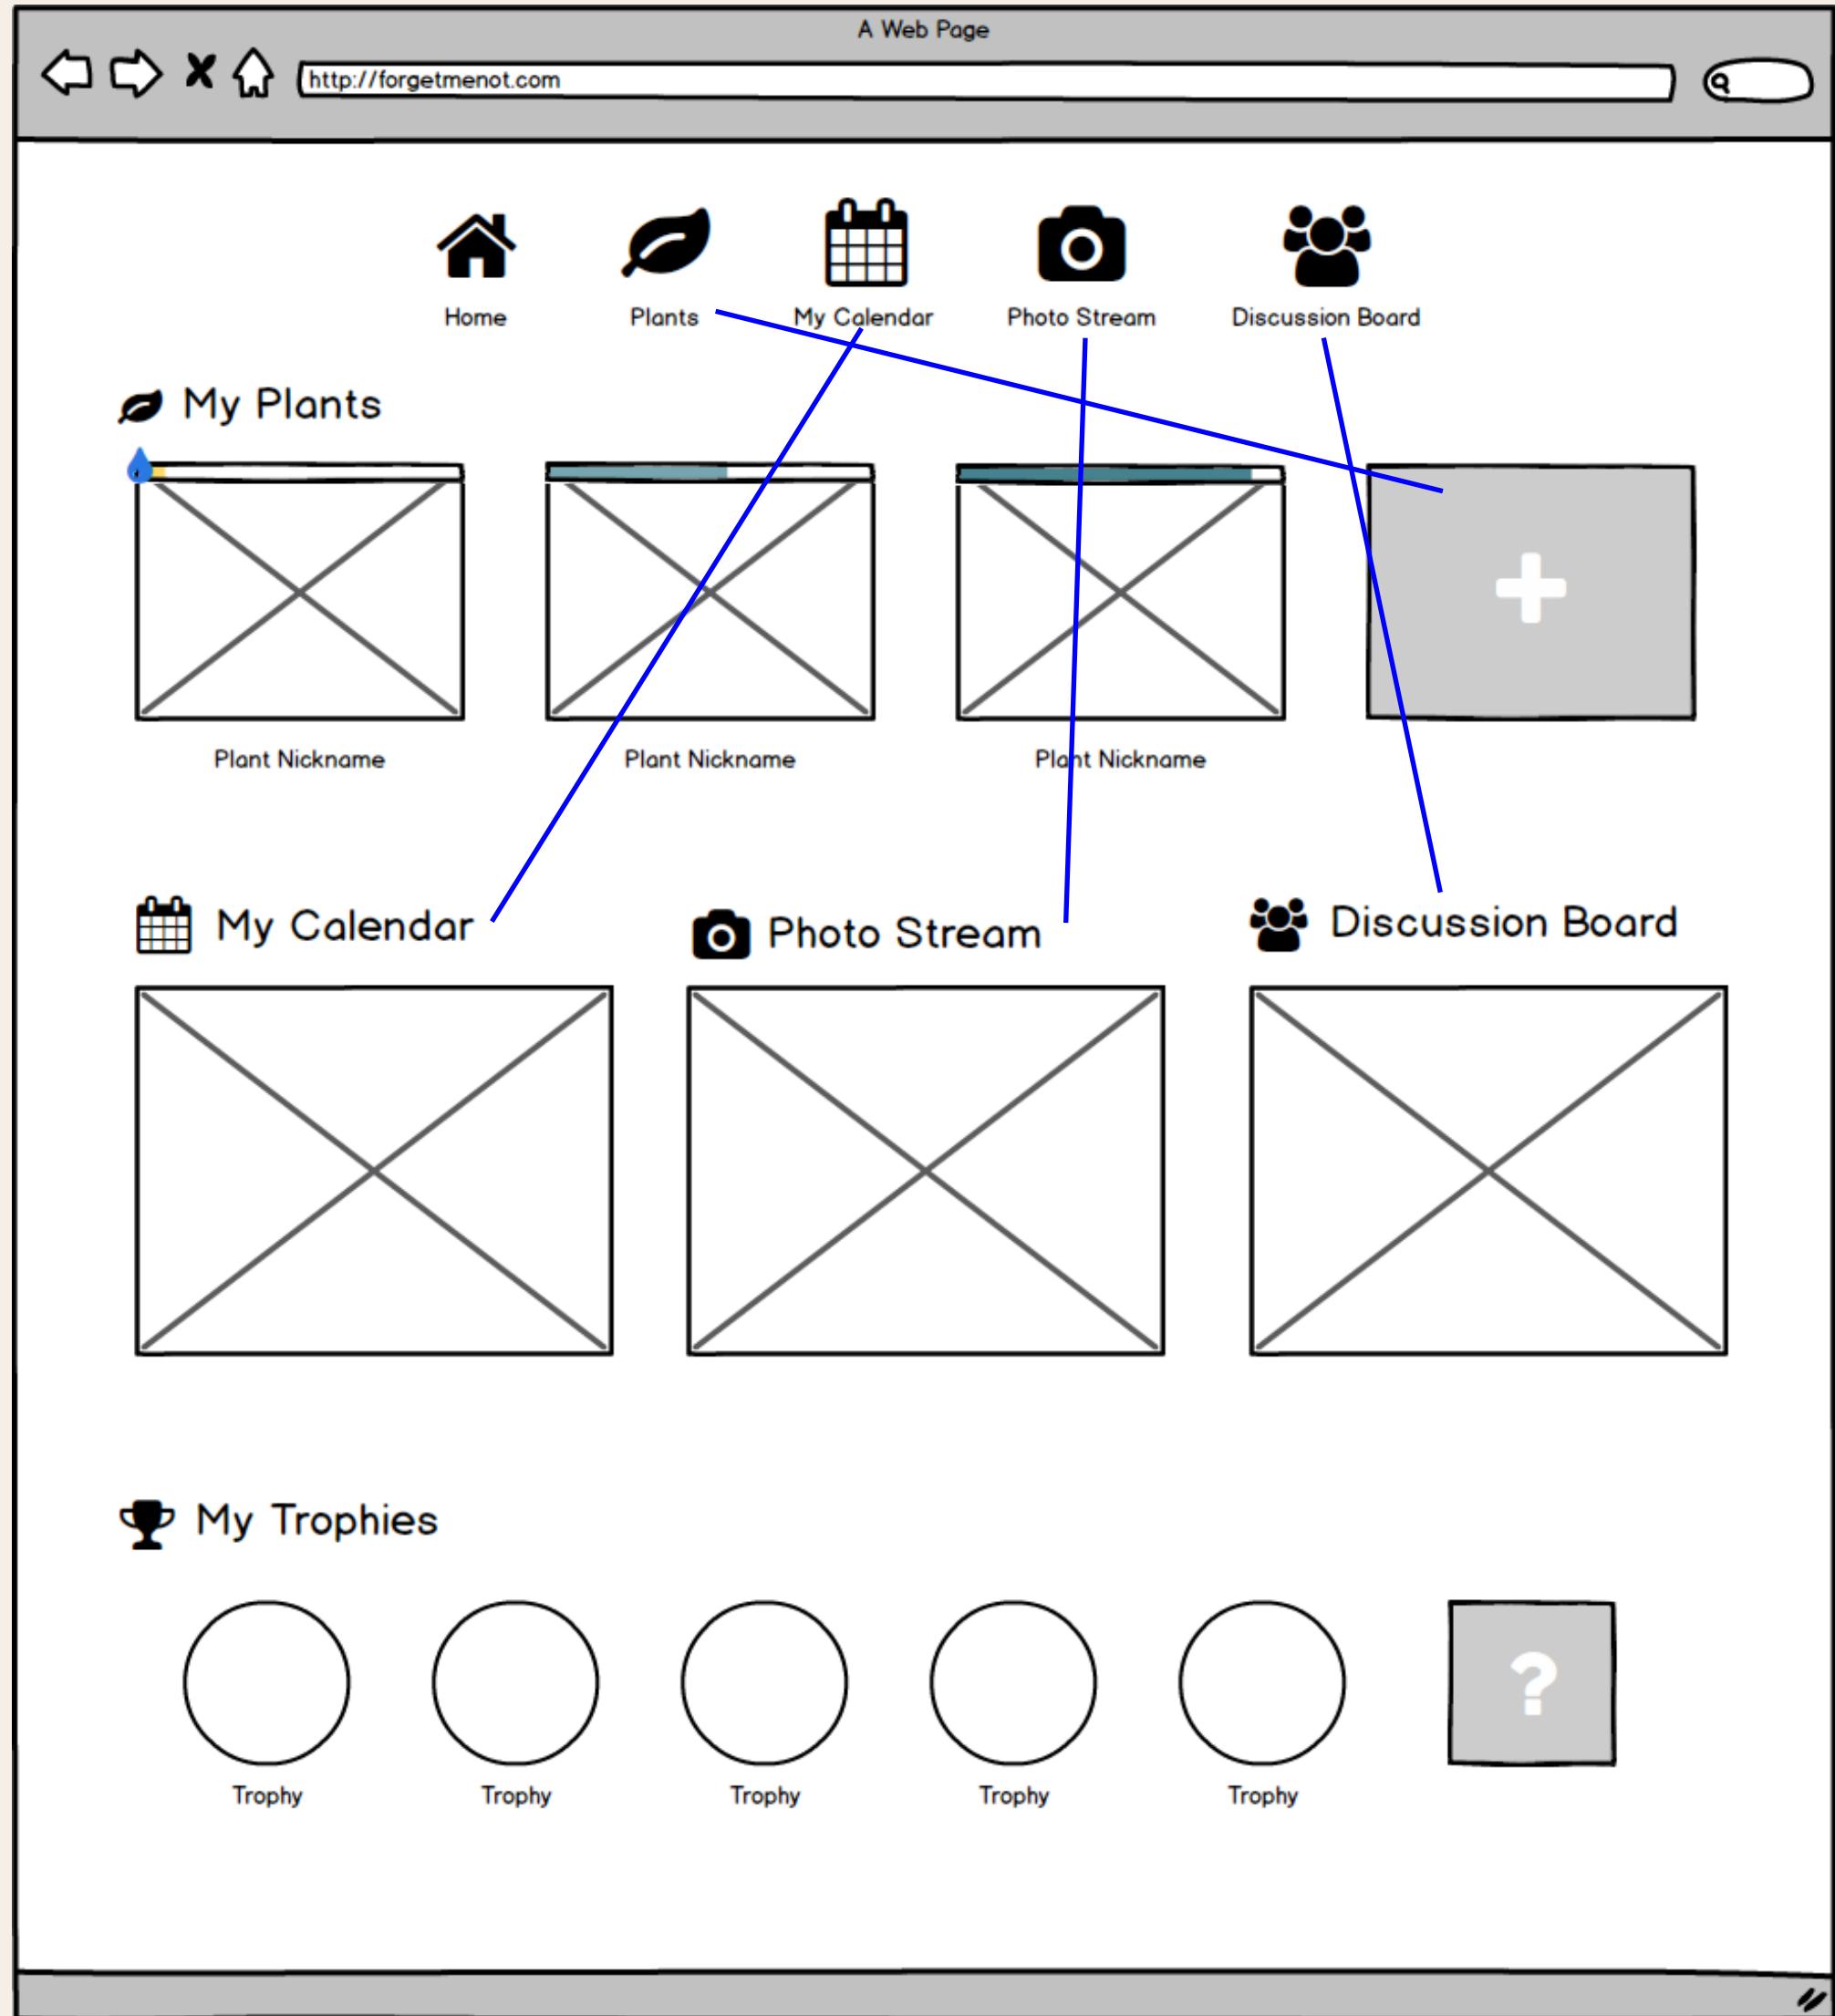

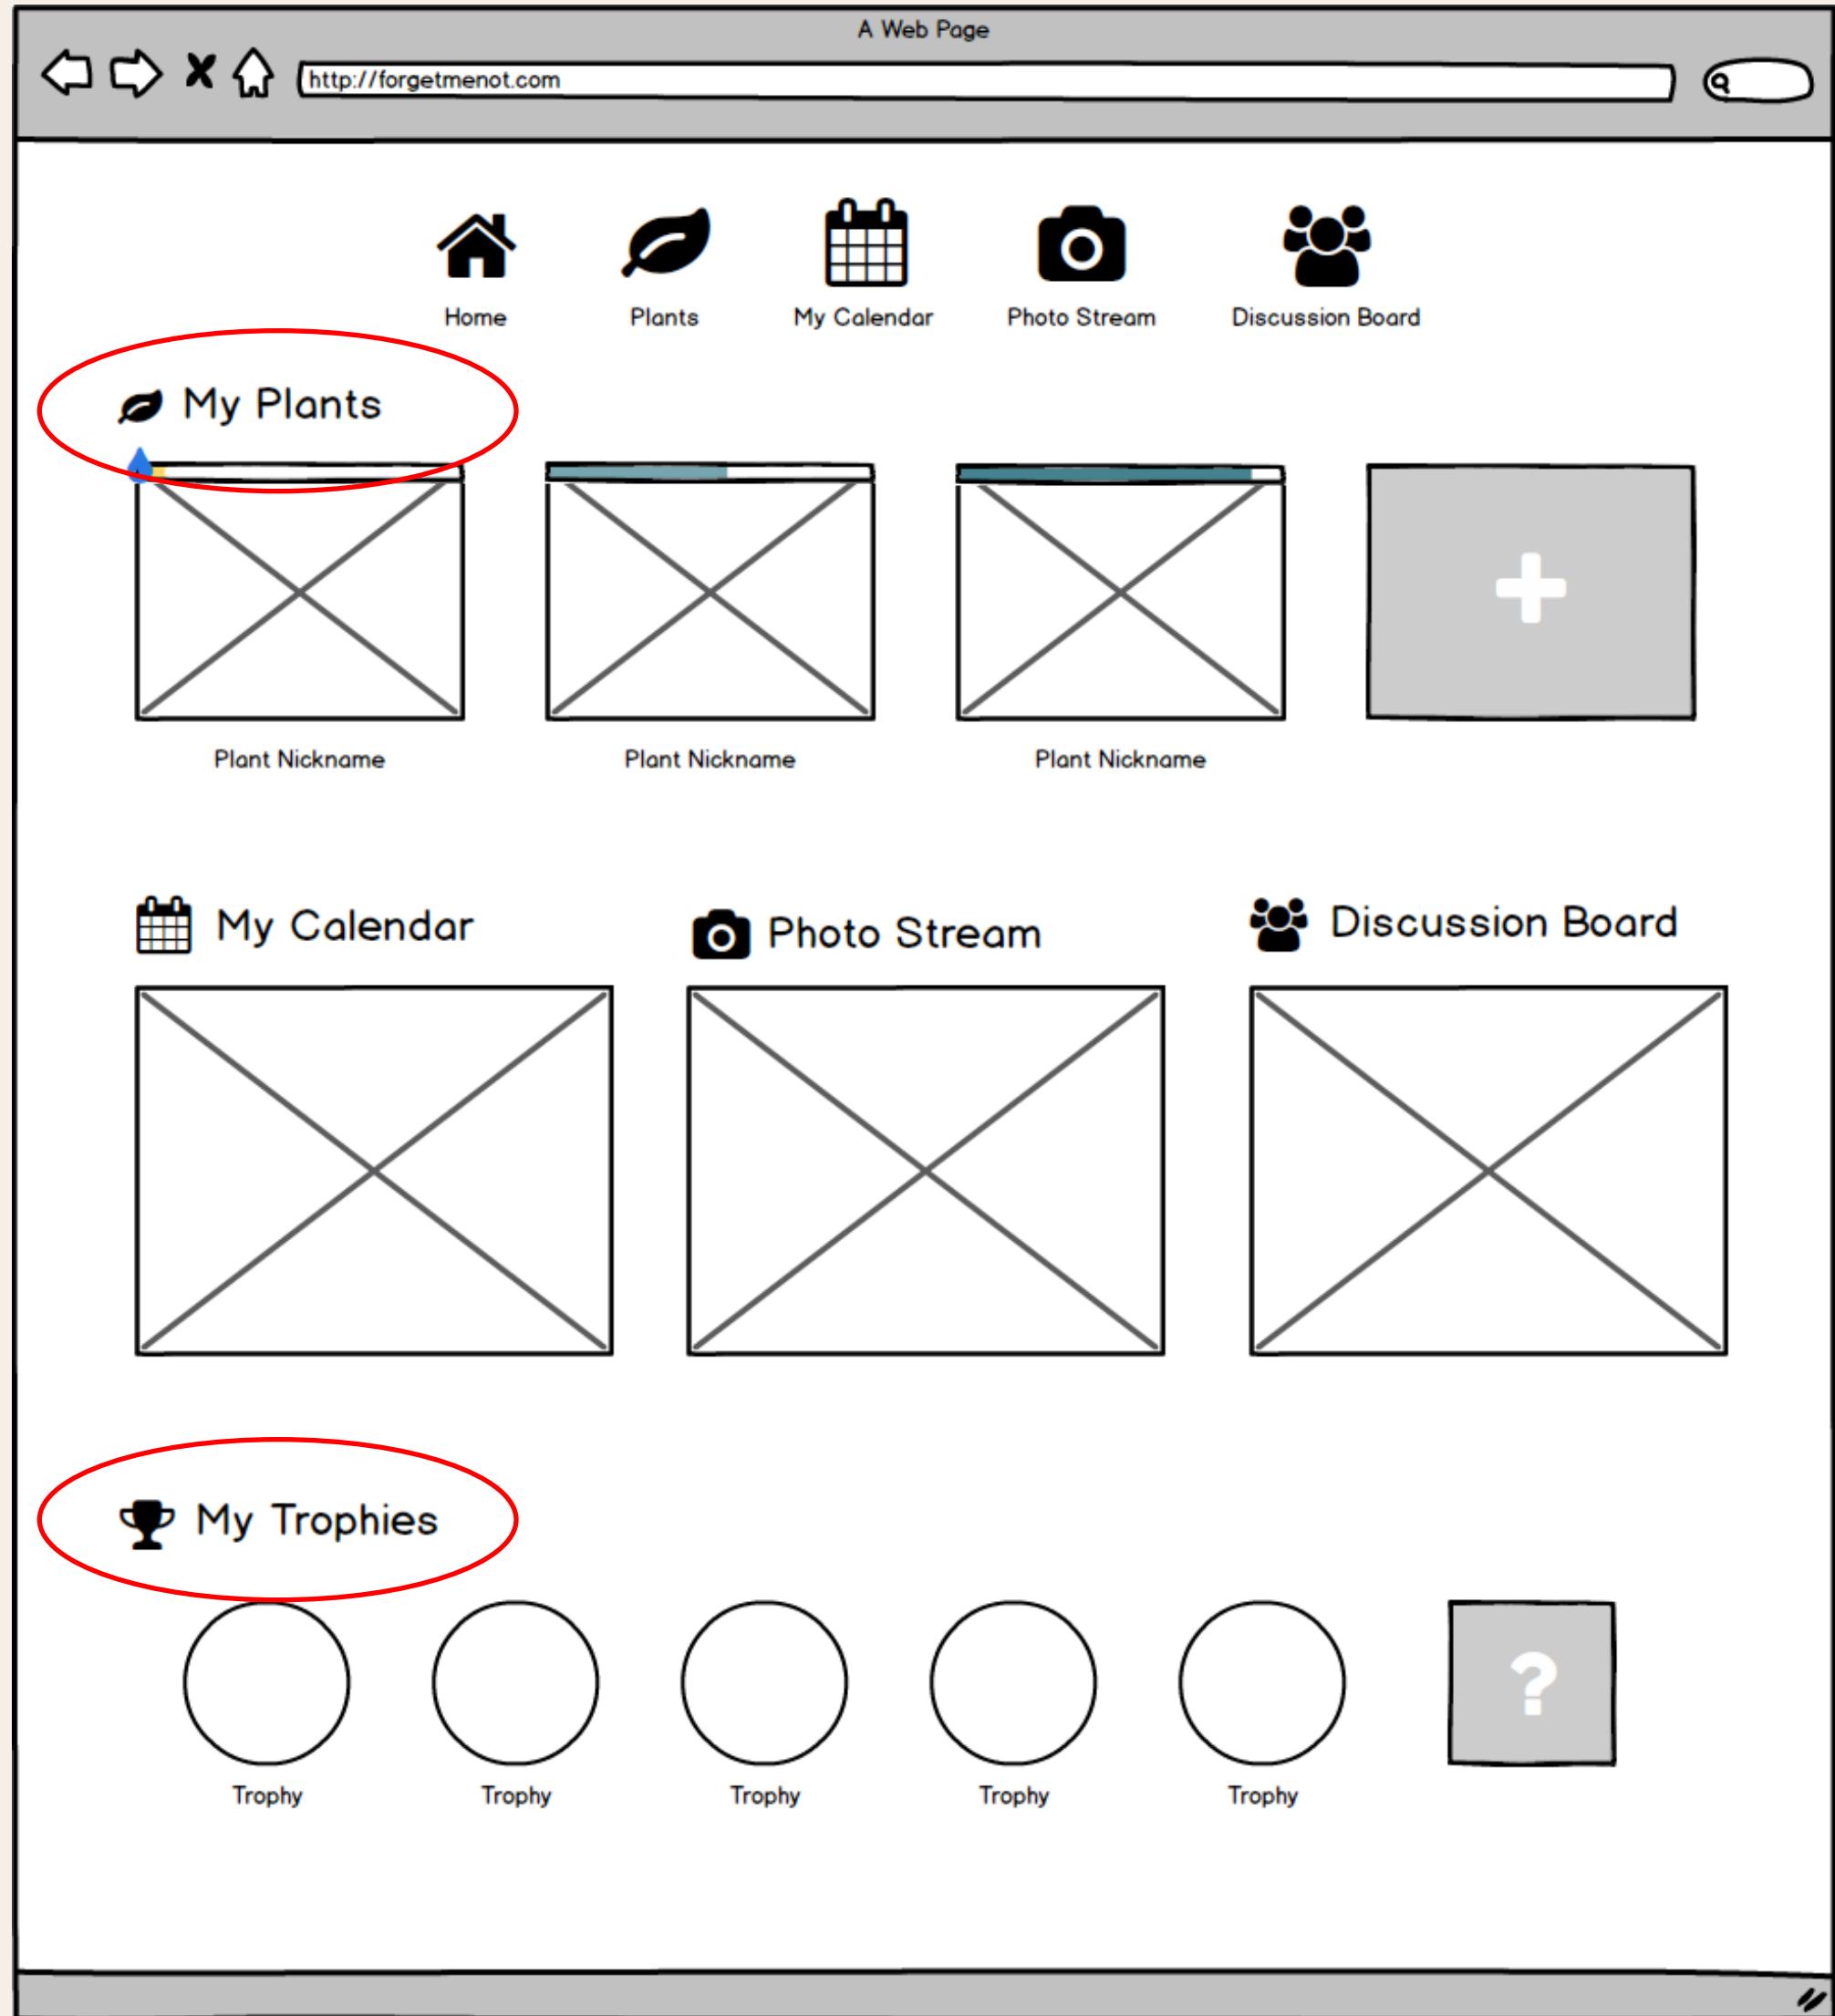

WISHLIST

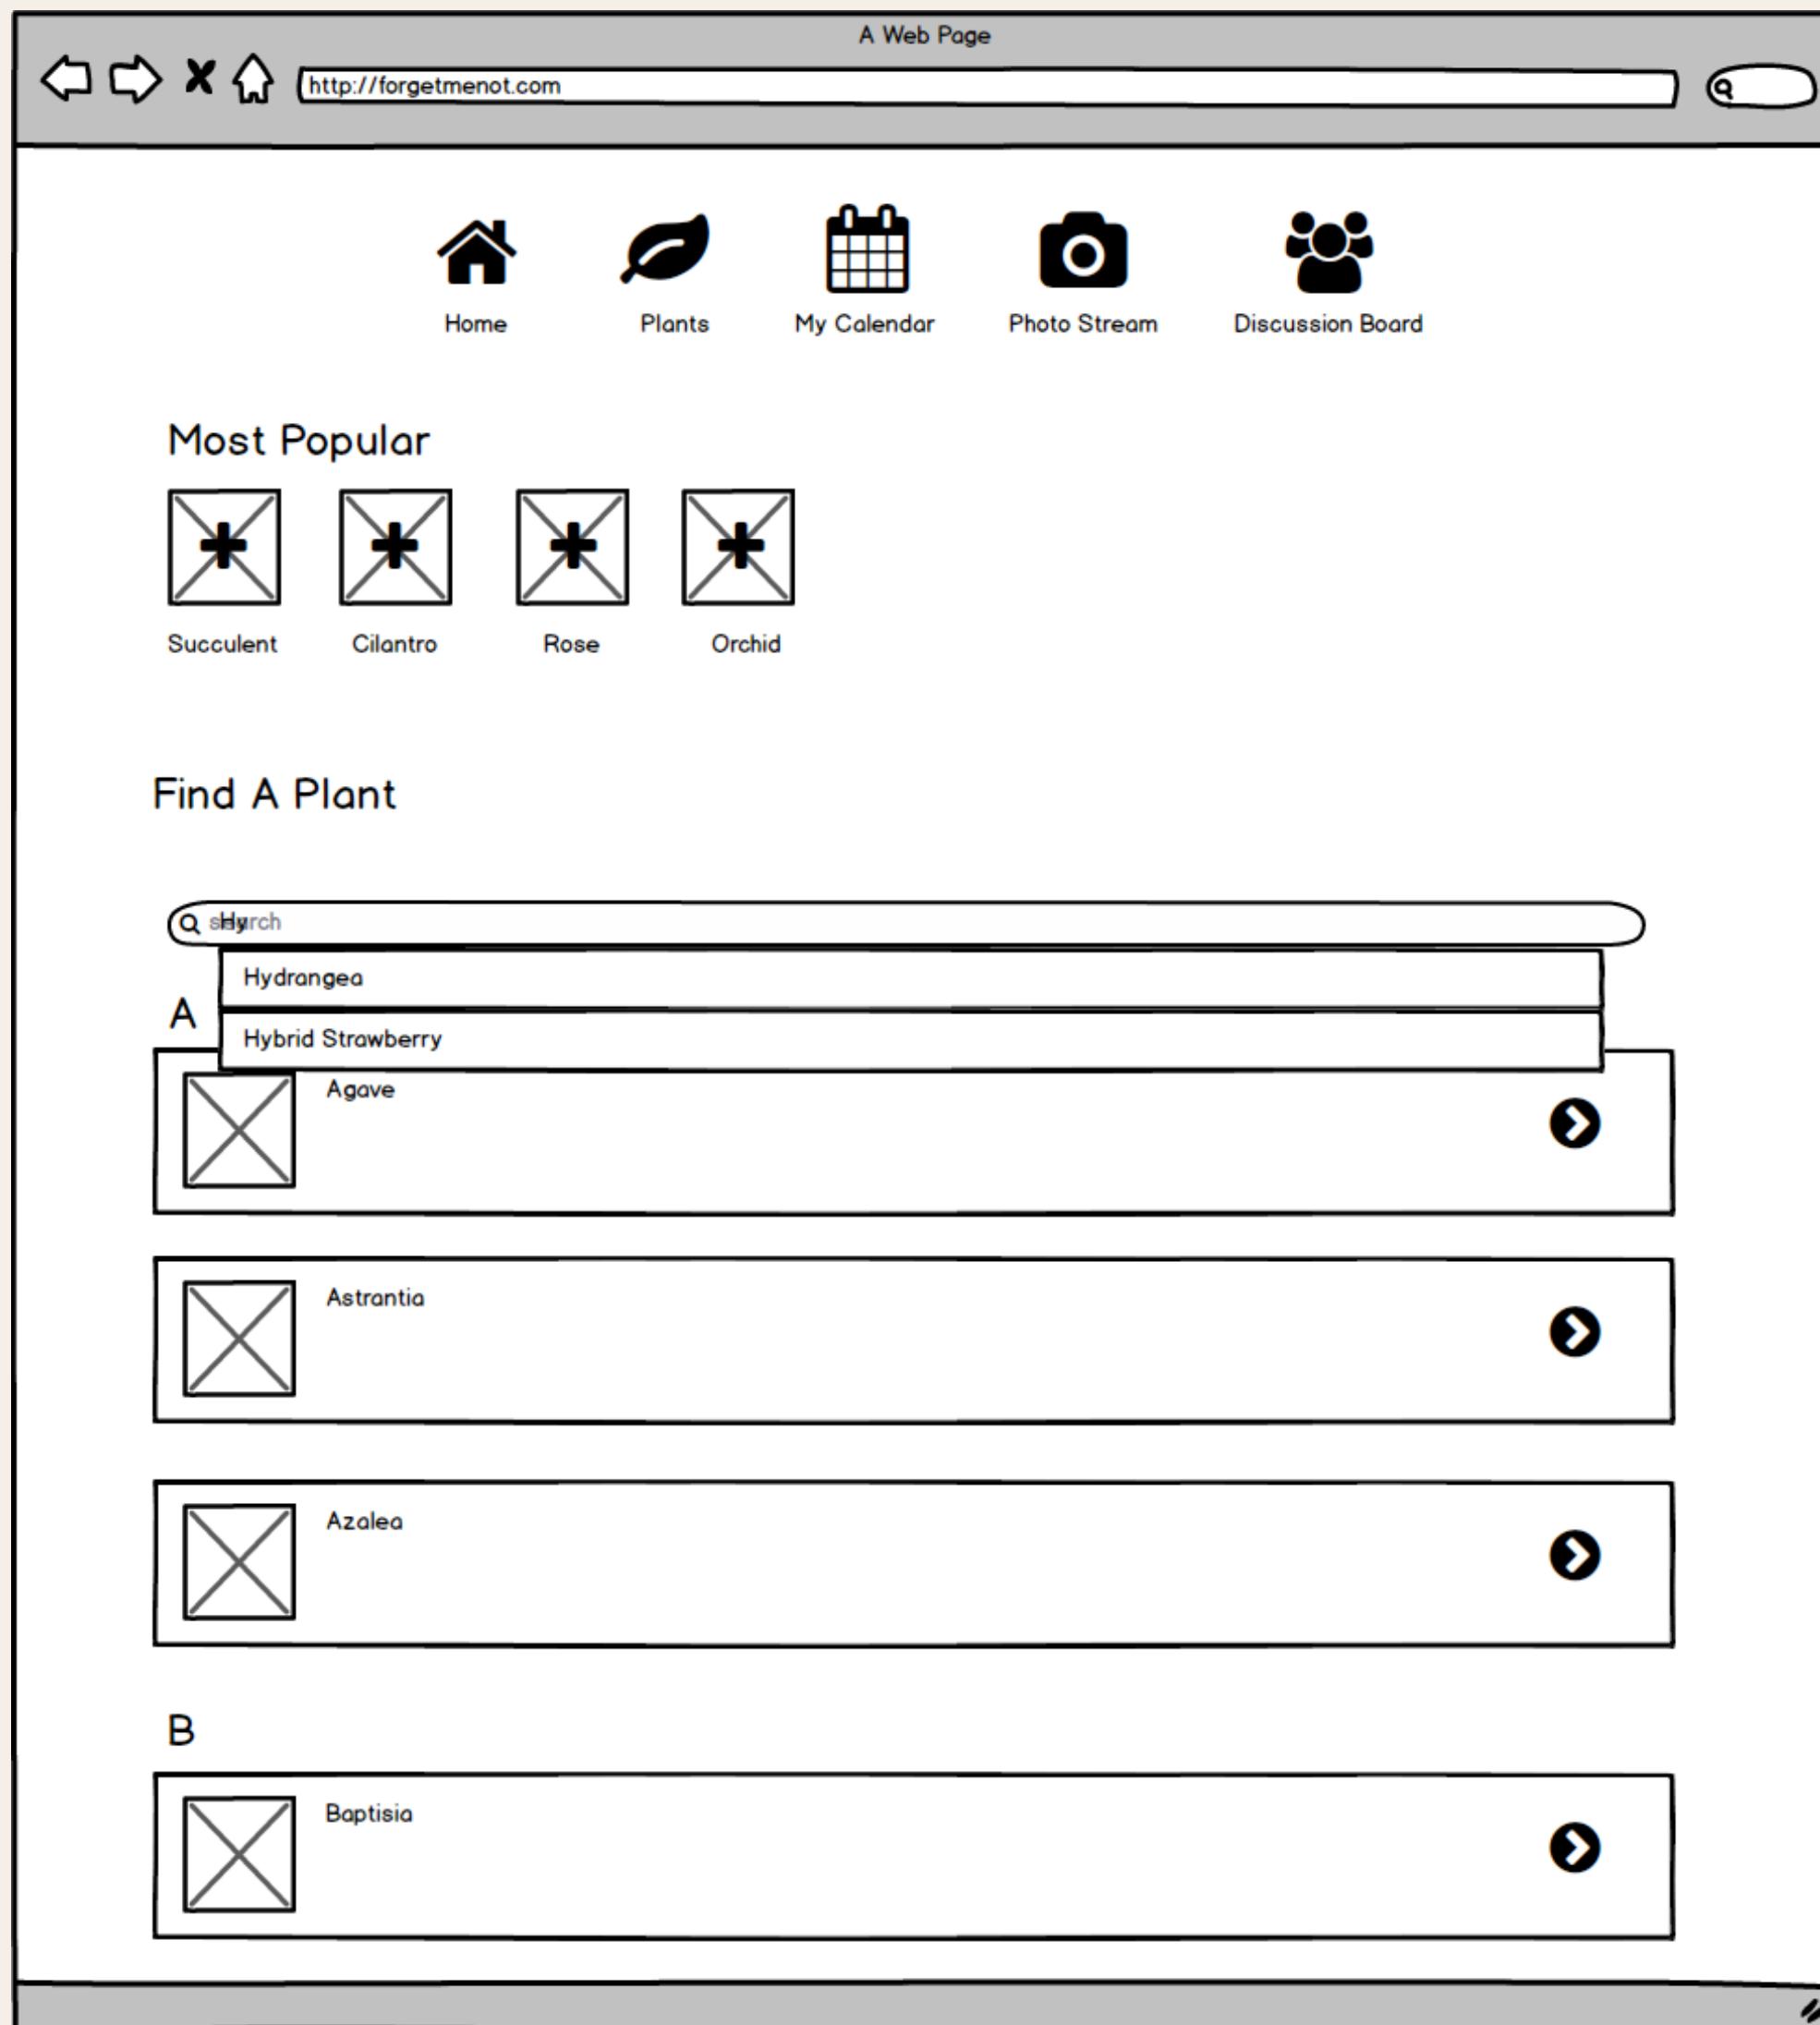

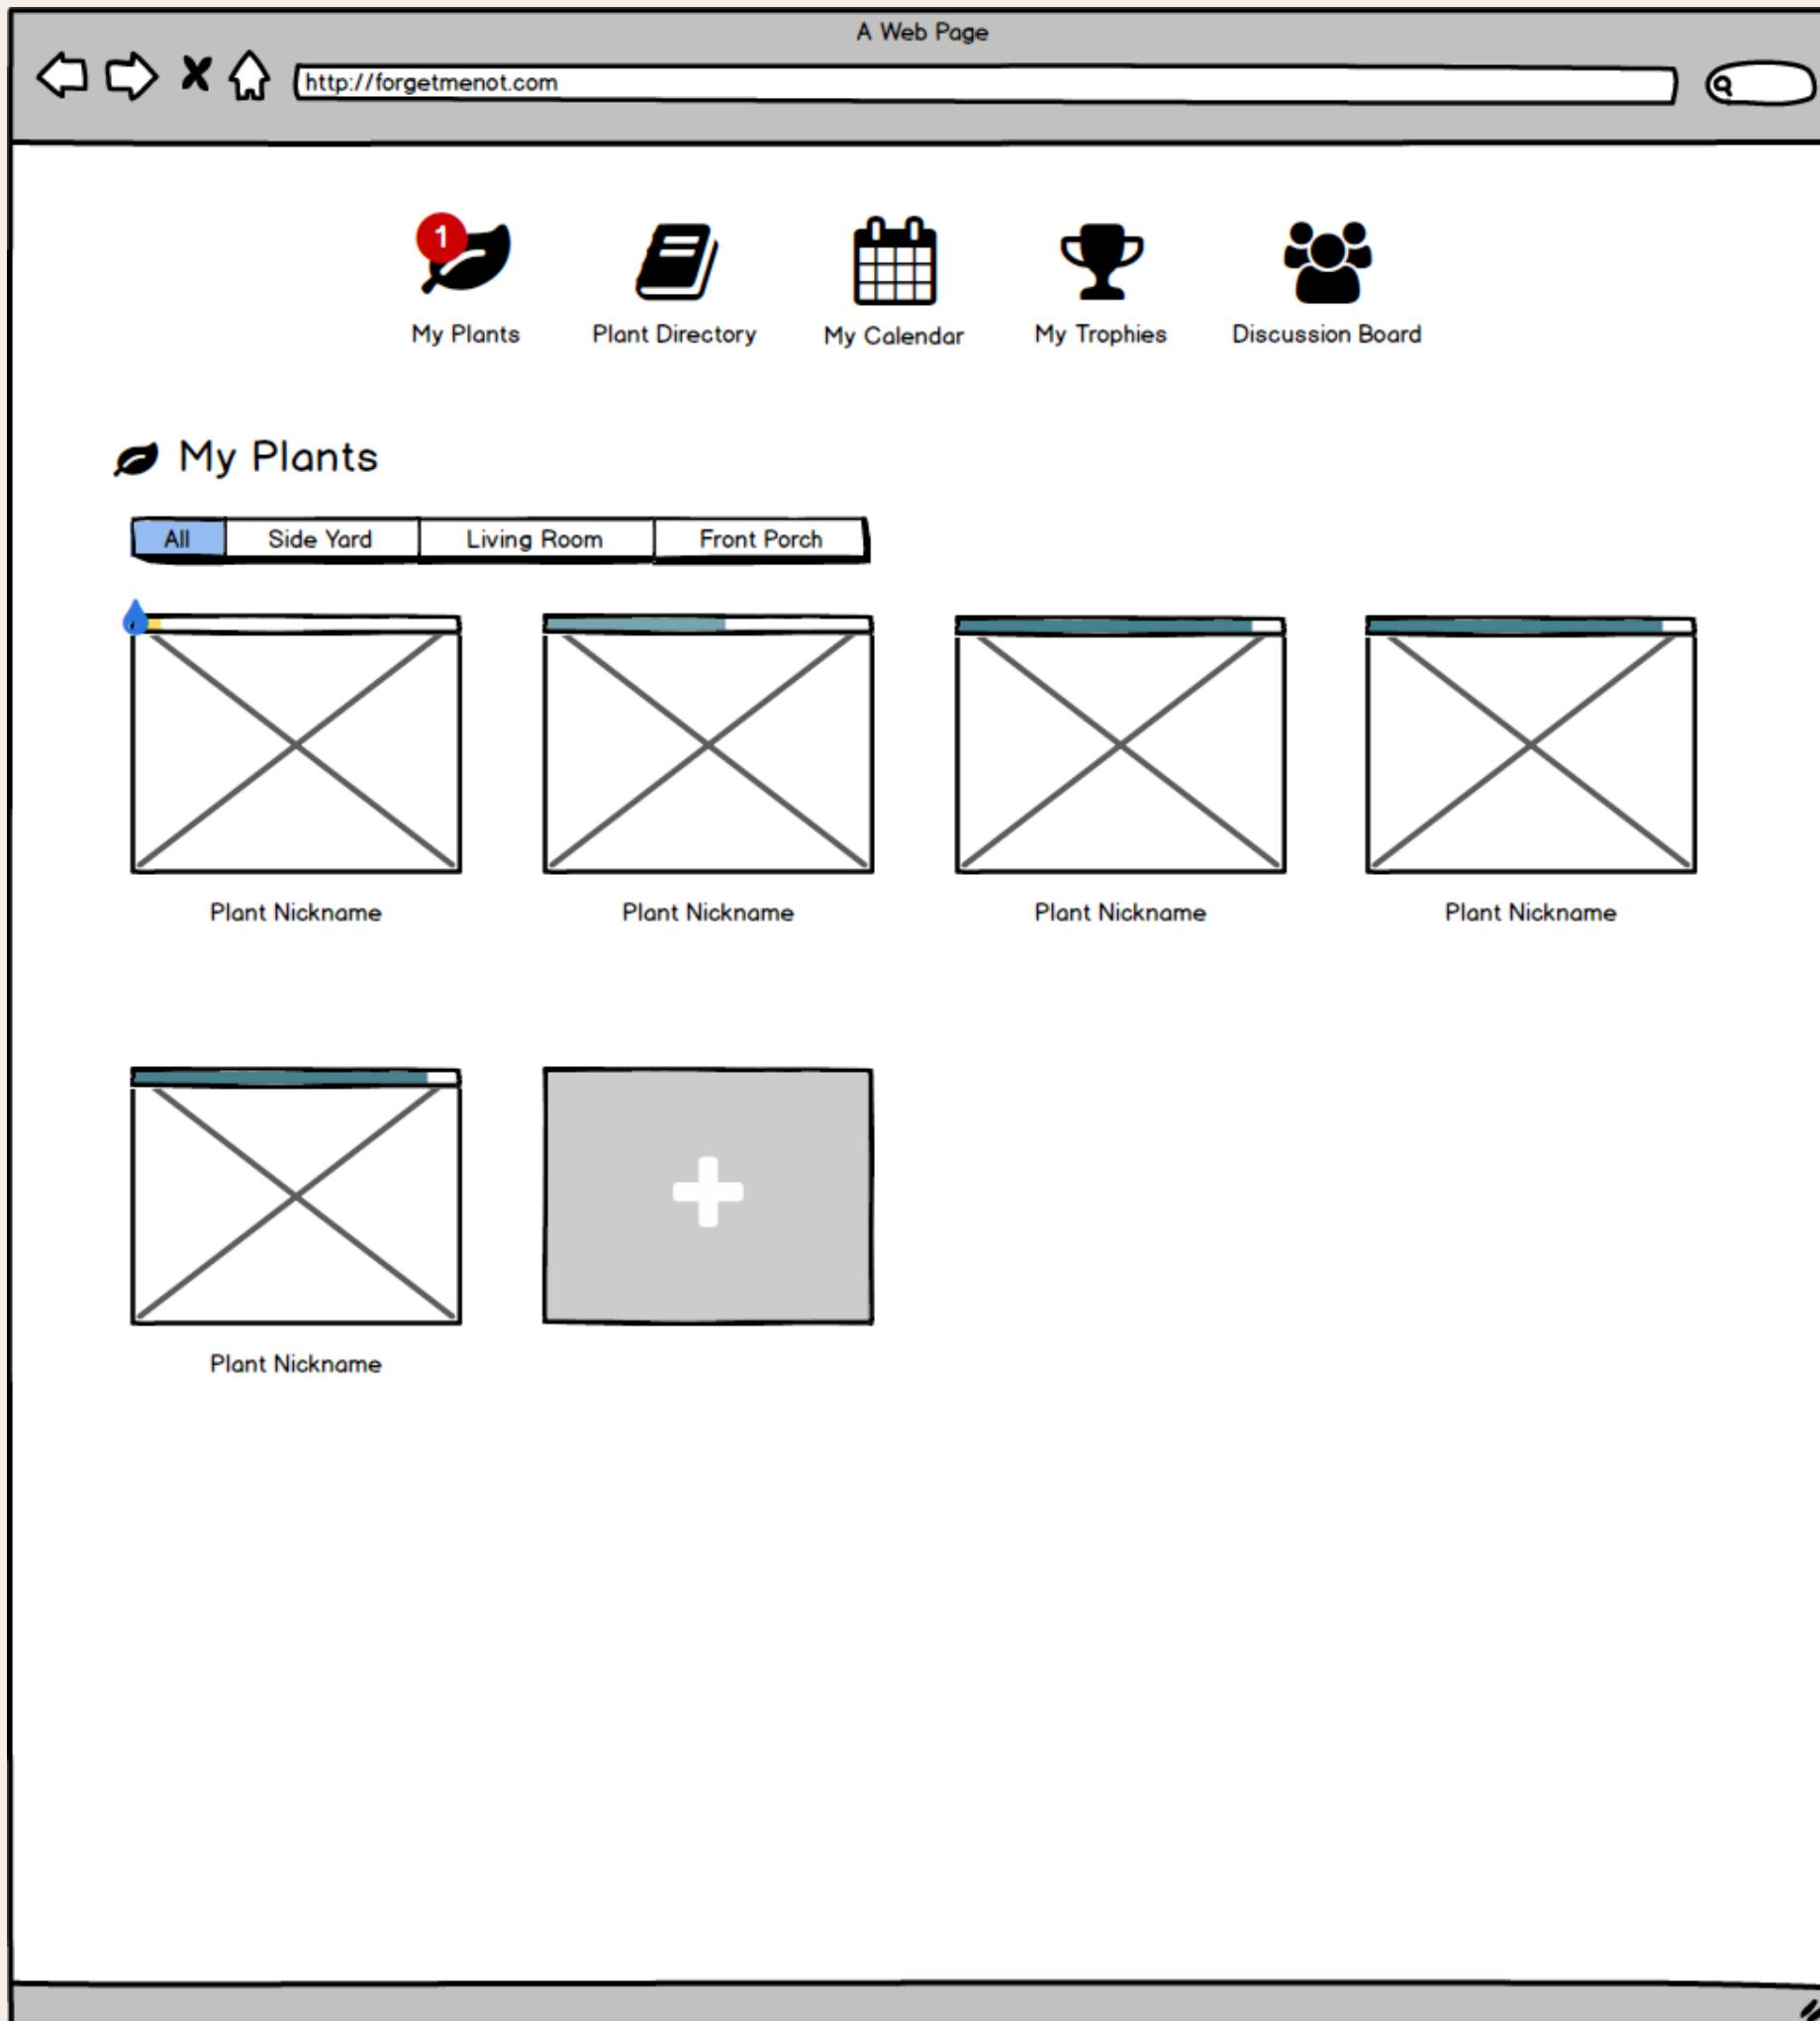

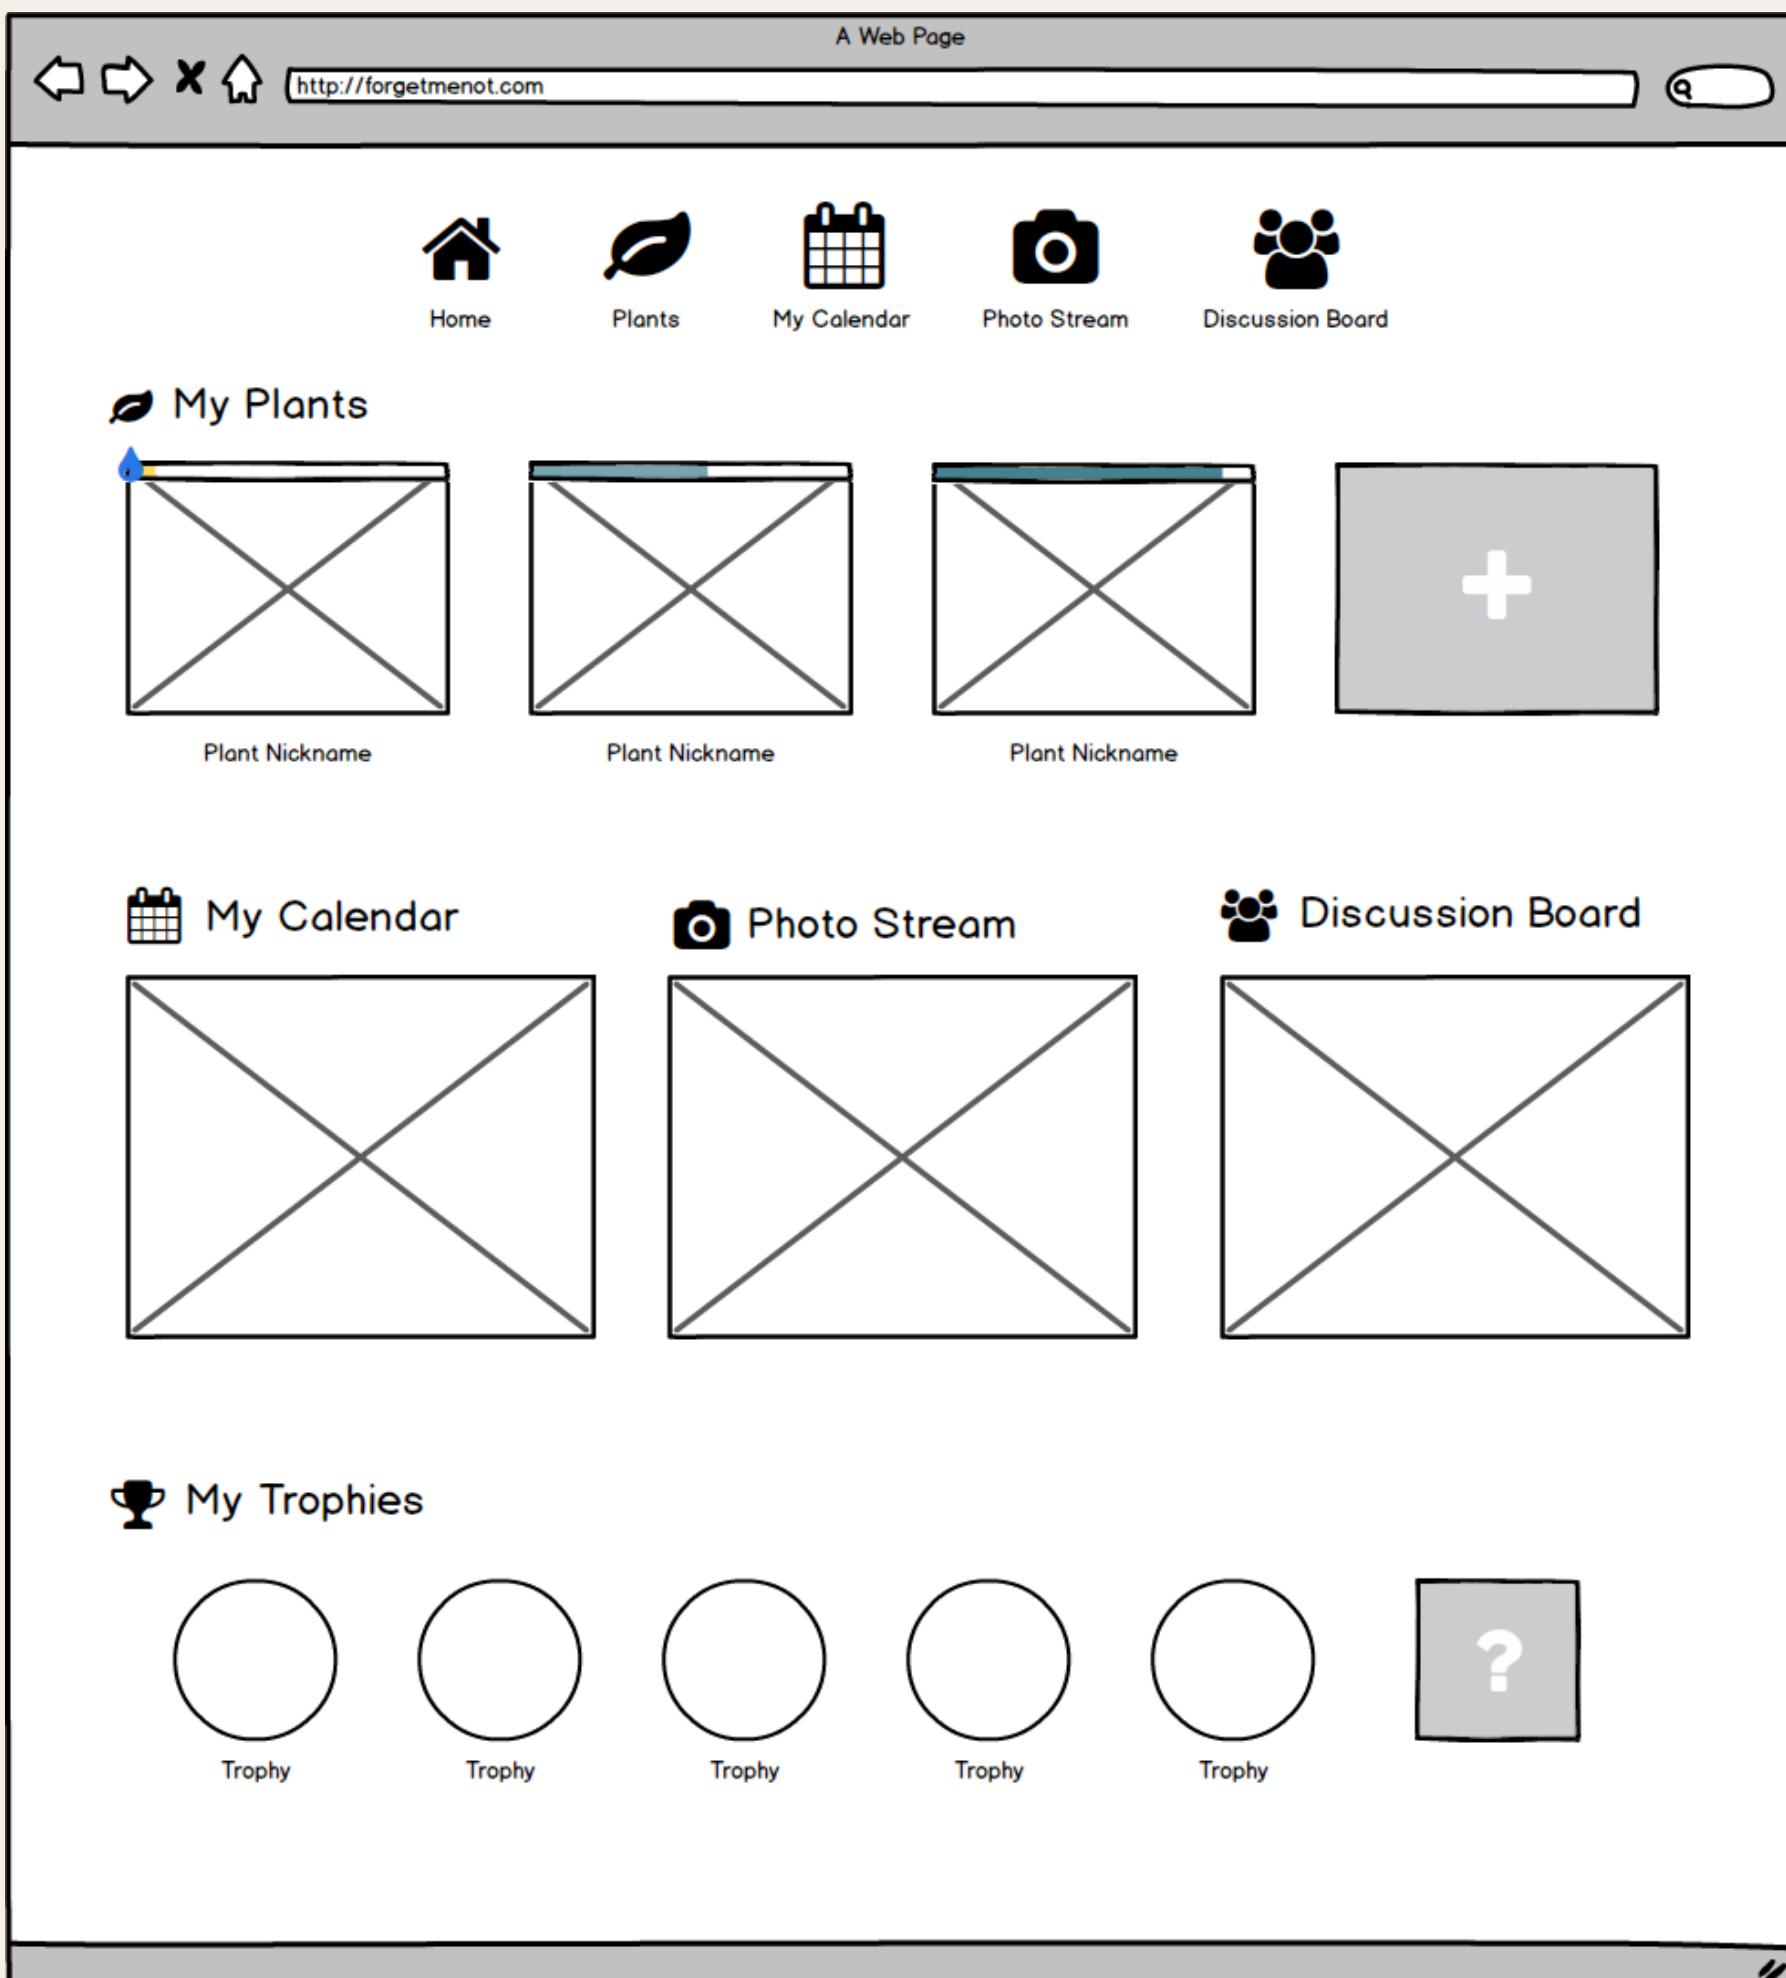

EVENT CALENDAR

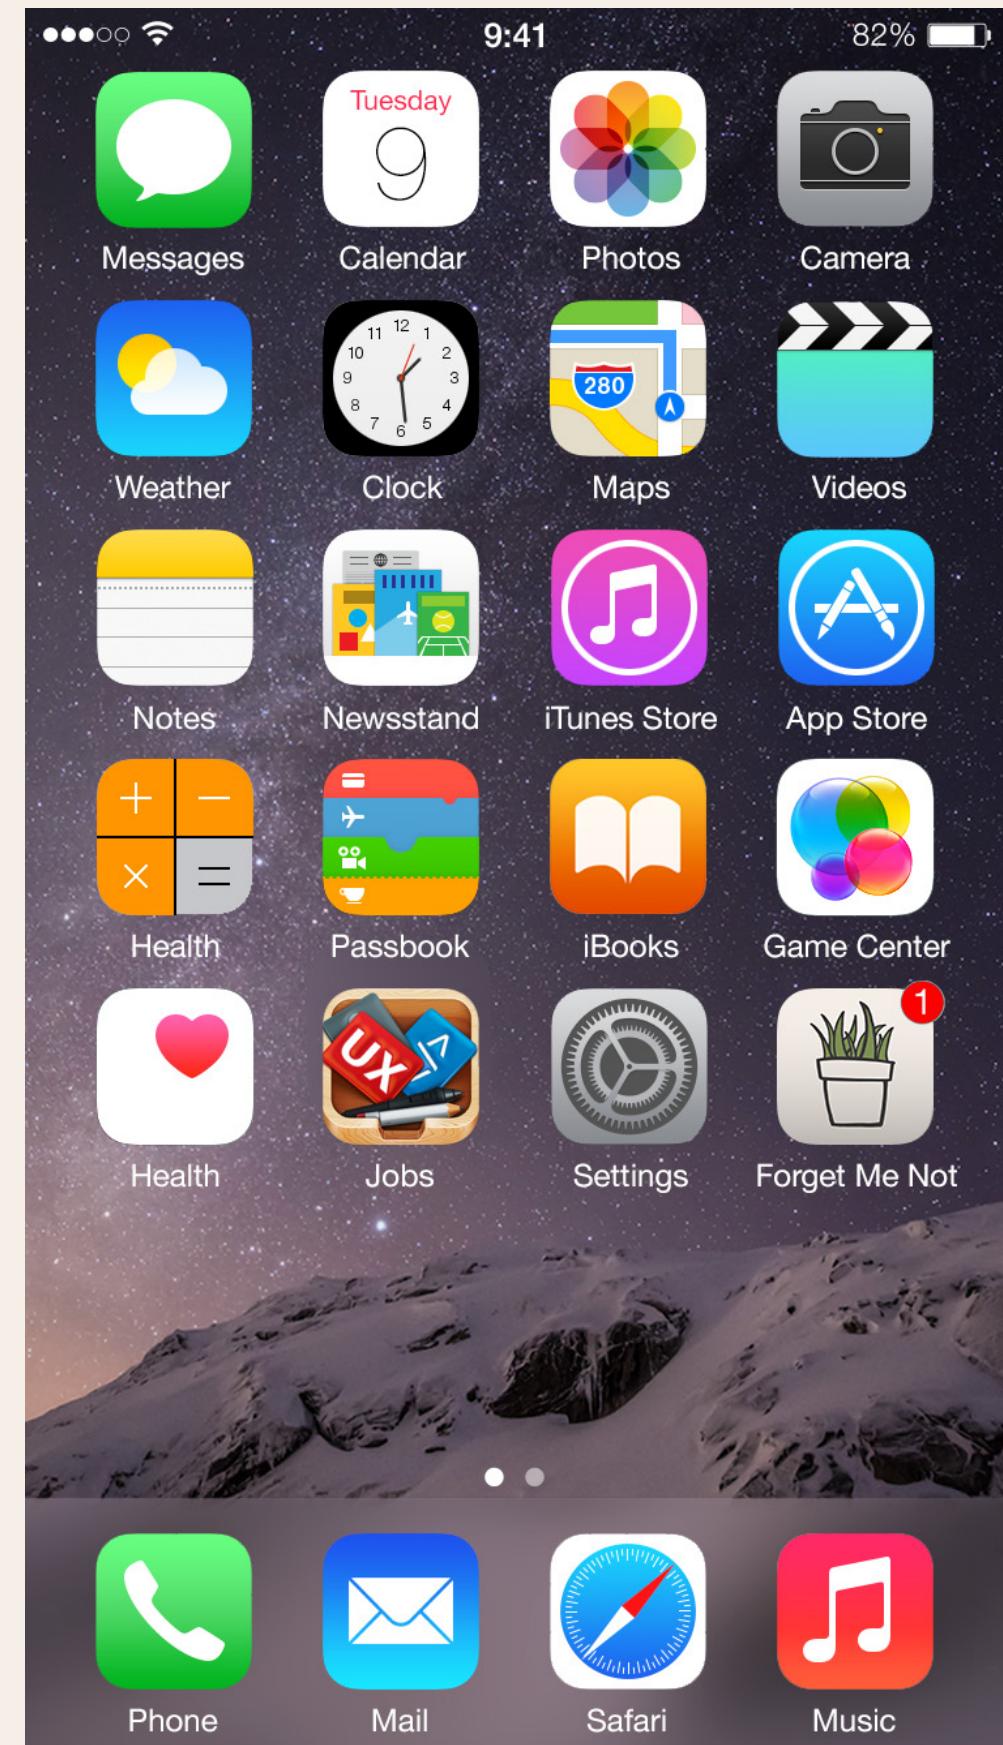

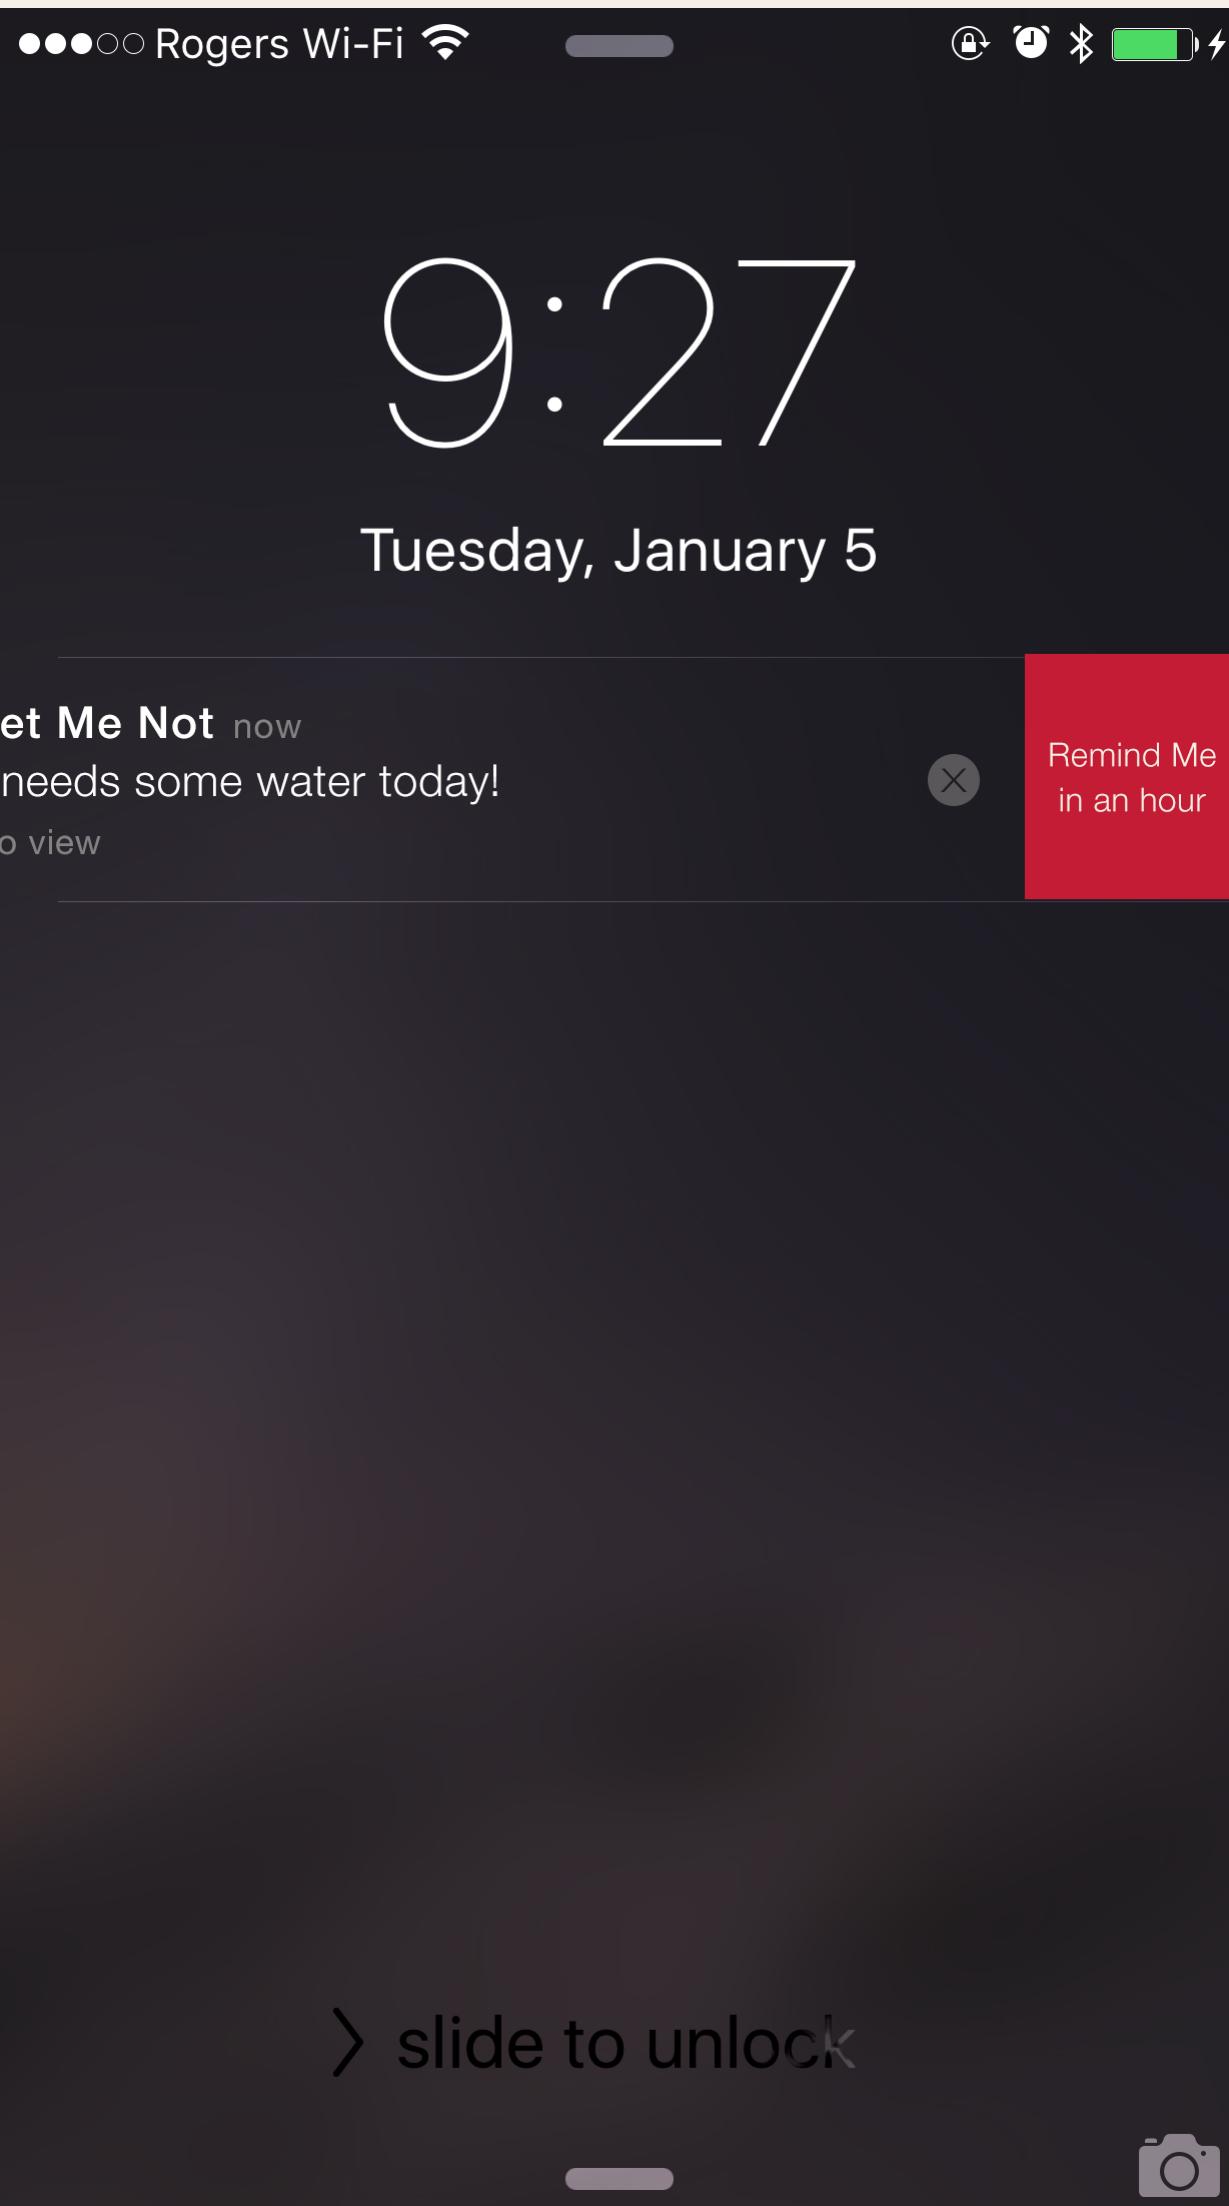

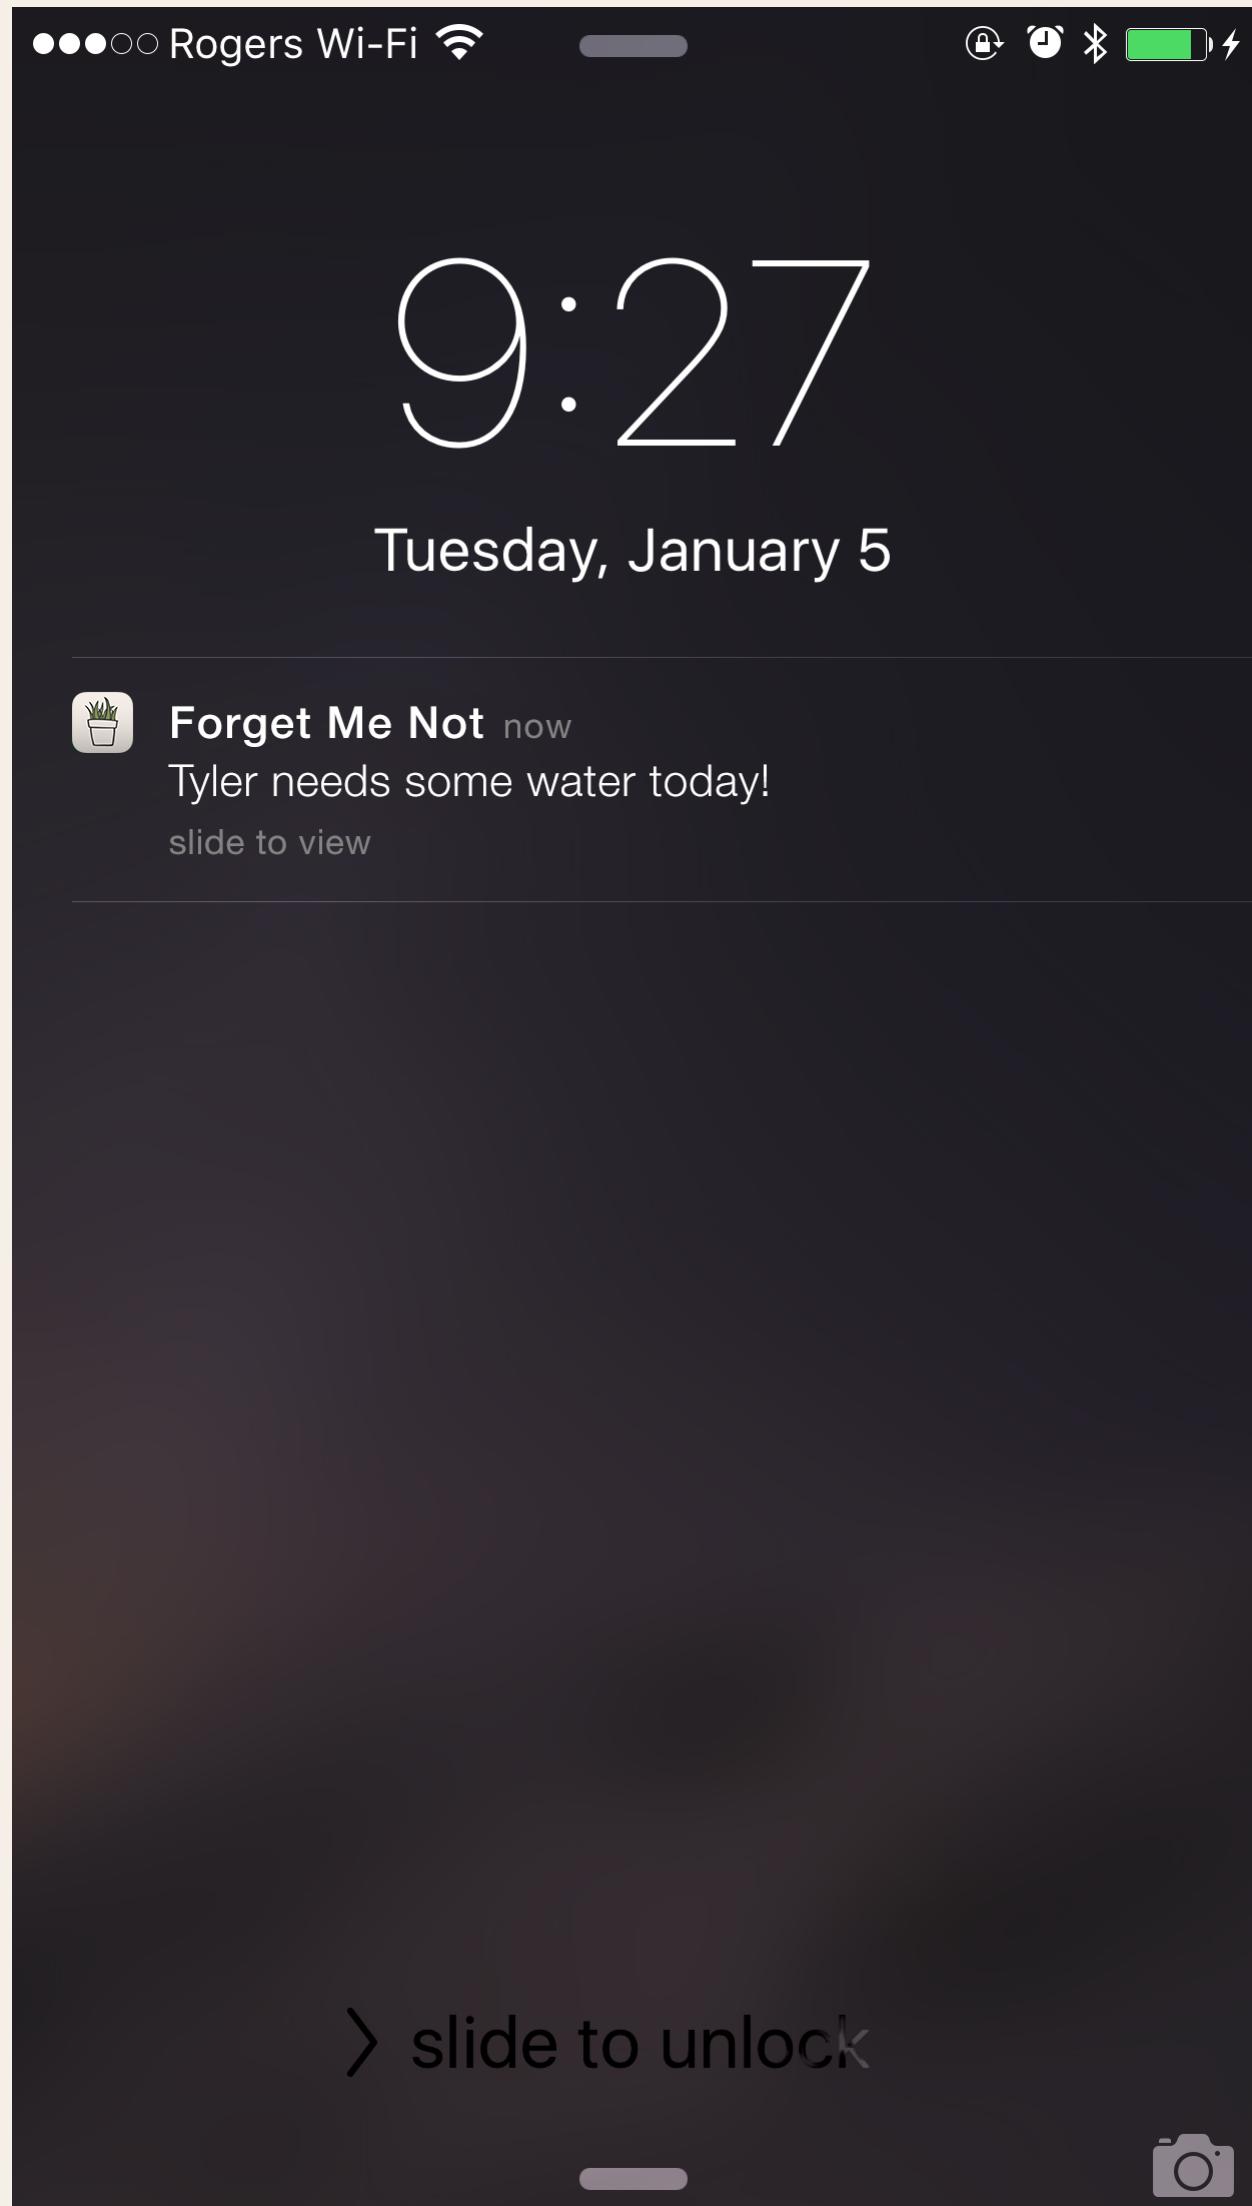

THE PROTOTYPE

Teresa, some of your plants need attention!

Looks like **Tyler** needs to be watered now. **Zanny** could also use some attention – if the soil is dry, go ahead and water her too.

Water

Caring for your Succulent

LIGHT

Mammillaria species appreciate strong light, but many species dislike more than four hours of direct summer sunlight. Provide bright, even light for best results.

WATERING

Allow the soil mix to become nearly dry between waterings, but then water thoroughly. Immaculate drainage is essential, so never let the pots sit in water. Suspend watering in the winter, but mist occasionally.

SOIL & FERTILIZER (See Discussions for vendor recommendations)

A rich, fast-draining cactus mix is ideal. During the growing season, fertilize with a cacti fertilizer mix. Suspend feeding during the dormant winter period.

Repot as needed, preferably during the warm season. To repot a cacti, simply make sure the soil is dry before repotting, then remove from the pot. Knock away the old soil from the roots, making sure to remove any rotted or dead roots in the process. Treat any cuts with a fungicide. Place the plant in its new pot and backfill with potting soil, spreading the roots out as you repot. Leave the plant dry for a week or so, then begin to water lightly to reduce the risk of root rot.

PAINTED LADY

Echeveria derenbergii

Add This Plant

Caring for the Painted Lady

LIGHT

Prefers bright light, but not direct sun. This succulent can take full sun along the coast, but in hotter inland areas it should be given some shade.

WATERING

During summer, the soil should be kept moist, while during winter it should not dry up completely.

SOIL & FERTILIZER (See Discussions for vendor recommendations)

Use succulent fertilizer (e.g. N3-P6-K12)

FLOWERING

In bright light, *Echeveria derenbergii* forms small rosettes with fleshy, glaucous light silvery blue leaves with pink tips. It quickly offsets to form clusters. In summer it blooms with short-arching racemes of flowers. The inside of the flower is yellow, the outside of the petals are yellow at the base and at the edges, with reddening at the tip and along the keel, which runs down the middle. Plants usually put out several flower stalks simultaneously. This succulent tends to lose bottom leaves on the rosettes in winter. If this happens, the rosette stem can be cut in spring and restarted as a fresh cutting.

SIZE

This small succulent grows up to 6 inches tall. 3 inch rosettes combine to form larger clumps up to 3 feet.
